

The introduction explains the experimental setup and the motivation for the benchmark.

The right column presents an independent argument with its own stable margin and body lines.

Step 1: Bootstrapped camera annotations; Step 2: Hand pose estimation; Step 3: Evaluate action classification

Figure 2. A diagram with long labels and independent model components. The labels remain searchable inside one figure object.

The results in this column describe the model and continue to the usual body text margin.

- First item uses an indented bullet.

The item continues on an indented line.

A final unindented line closes this column.

A second argument occupies the right column with a separate stable gutter for its numbers.

- The right column also contains a bullet.

And an indented continuation of the item.

The following line returns to the body margin.

Table 3. Model scores with a caption above the cells.

Method	Score	Accuracy
Baseline	32.91	50.30
Proposed	21.92	54.70

The paragraph after the table discusses the remaining sources of error and should retain its own numbered physical lines outside the table.
